

Quality control

Quality control is maintained at all manufacturing stages, starting with raw material supply, regular inspections between operations, to final and release inspections.

The majority of our quality control personnel have TÜV 2nd degree qualifications in accordance with EN 473 in the scope of non-destructive testing of material and welds.

Within its organisational structure the company also utilises an [In-house Lab](#) ^[1], [certified](#) ^[2] for both destructive and non-destructive tests and calibration of measuring instruments.
